

Nautical

Coosa's *Nautical Series* boards consist of polyurethane foam filled throughout with layers of continuous strand glass. It is available in four densities: 24 lbs, 20 lbs and 15 lbs.

Nautical 24 is one of Coosa's strongest and stiffer composite boards and is a proven lightweight, high strength-to-weight composite panel. *Nautical 24* is used in low-stress structural components such as stringers, transoms and flooring.

Nautical 20 is a lighter-weight alternative to *Nautical 24* but maintains the stiffness and strength of the Nautical Series. *Nautical 20* is used in components such as stringers, decking and walls.

Nautical 15 is super light-weight board that is perfect for panel cores where weight and/or cost are a factor.

Benefits

- 37%-60% lighter than plywood
- NO water rot or insect infestation
 - Low water absorption
 - Dimensionally stable
- Stronger than foam-only boards
- Available in 4' and 5' wide panels
- Mold, mildew and algae resistant
- NO special maintenance required
- Thicknesses from ¼" to 2" available
 - Sanded for easy lamination
 - No special tools needed
